SUMMARY

Senior Database Reliability Engineer at The Walt Disney Company with 5+ years of experience owning database infrastructure across distributed, cloud-native systems at healthcare-tech and enterprise scale. Core expertise in PostgreSQL, Aurora, MySQL, MongoDB, Cassandra and Snowflake — from schema design and query optimization to multi-region disaster recovery and zero-downtime migrations. Track record of reducing incident response time by 30%, improving read-heavy query performance by 50%, and driving $1.2M+ in annualized AWS cost savings through RDS and EC2 right-sizing. Comfortable owning on-call rotations, post-mortems and infrastructure as code end to end with Terraform and GitHub Actions.

EXPERIENCE

Senior Database Reliability Engineer

`Jul 2026 – Present`

The Walt Disney Company

- Applying SRE practices to the availability, performance and operational excellence of business-critical database platforms.

Software Engineer — Site Reliability Engineering (DBA)

`Bengaluru · Feb 2024 – Jul 2026`

GlobalLogic (Client: Hitachi Digital) · Enterprise IT & Digital Transformation · Team of 6 SREs

- Owned reliability and performance of PostgreSQL, Aurora, MySQL, MongoDB, Cassandra and Snowflake clusters serving global enterprise workloads across 3 AWS regions; maintained 99.95%+ measured uptime against contractual SLA.
- Designed and delivered a multi-region DR architecture using Aurora Global Database and AWS DMS, reducing RPO from 15 minutes to near-zero and RTO from 8 minutes to under 60 seconds, validated quarterly through automated failover runbooks.
- Automated RDS provisioning, snapshot scheduling and patch management via Terraform + GitHub Actions, cutting average deployment lead time from ~5 hours to 3 hours (40% reduction) and eliminating manual config drift.
- Identified and remediated EC2 overprovisioning, idle RDS instances and unattached EBS volumes through a structured right-sizing initiative, delivering $1.2M in annualized AWS cost savings.
- Built AWS Lambda + CloudWatch automation for nightly failover validation and log retention cleanup, reclaiming 10+ engineer-hours per week.
- Deployed a Datadog + Grafana observability stack with anomaly-based alerting across all database tiers; reduced MTTR from ~45 to 31 minutes (30% improvement).
- Optimized MongoDB aggregation pipelines and re-modeled Cassandra partition keys to eliminate hotspots, cutting average query response time from 820ms to 450ms (45% improvement).
- Mentored 2 junior SREs on Terraform, on-call runbook authoring and PostgreSQL vacuum tuning; reduced their mean time-to-first-resolution on database incidents by 35%.

Software Engineer — Database Administrator

Ahmedabad · Dec 2021 – Feb 2024

HHAeXchange · Healthcare-Tech SaaS · 500K+ caregivers on platform

- Administered 120+ production PostgreSQL, MySQL, Cassandra and Oracle databases across AWS and on-premises environments, processing 2M+ daily transactions with 99.99% measured uptime.
- Led a PostgreSQL query optimization initiative: rewrote 40+ slow queries using EXPLAIN ANALYZE, corrected missing/bloated indexes, tuned autovacuum and eliminated sequential scans — improving read-heavy performance by 50% (p95 latency 1.8s → 0.9s) and write throughput by 30%.
- Built Python and PowerShell automation for replication health checks, table partitioning and scheduled maintenance, reducing DBA manual toil by 40% and eliminating 3 recurring P2 incidents per month.
- Executed 6 zero-downtime on-premises-to-AWS migrations (PostgreSQL and MySQL to RDS/Aurora) using AWS DMS and pglogical, migrating 4+ TB with no SLA breach and sub-1-hour cutover windows.
- Consolidated 18 redundant AWS DMS replication tasks and tuned CDC batch sizes and LOB handling, reducing migration infrastructure costs by 25%.
- Developed reusable Terraform modules for RDS and enhanced Jenkins + Octopus CI/CD pipelines with automated schema migration validation, reducing schema deployment failures to zero over 14 months.
- Primary on-call DBA for P1/P0 incidents; authored 12 post-mortems and drove 8 systemic fixes, improving team on-call burden by 25%.

PROJECTS

High-Availability PostgreSQL Cluster with Patroni and Terraform

- Deployed a 3-node auto-healing PostgreSQL 15 cluster on AWS EC2 using Patroni and etcd for leader election and consensus; infrastructure managed via Terraform with automated drift detection.
- Integrated Prometheus + Grafana dashboards for replication lag, connection pool saturation and WAL metrics; achieved <5-second automatic failover across 20+ simulated failure scenarios.

ML-Powered Database Anomaly Detection

- Built a Python + Scikit-learn Isolation Forest model on 6 months of pg_stat_statements metrics to detect deadlocks, I/O spikes and autovacuum storms.
- Achieved 91% precision and 87% recall; reduced proactive investigation time by 60% and surfaced 4 previously undetected performance regressions in pre-production.

TECHNICAL SKILLS

Databases	PostgreSQL, Aurora, MySQL, MongoDB, Cassandra, Snowflake, Oracle
Cloud	AWS (RDS, EC2, DMS, Lambda, S3, IAM, CloudWatch, VPC), Azure (AZ-900)
IaC & DevOps	Terraform, GitHub Actions, Jenkins, Octopus Deploy, Docker, Ansible
Languages	Python, SQL, Bash, Go, PowerShell
Observability	Datadog, Grafana, Prometheus, CloudWatch, Loki, Alertmanager
SRE Practices	On-call rotation, incident command, post-mortems, SLO/SLA management, capacity planning

CERTIFICATIONS

- AWS Solutions Architect – Associate *(Amazon Web Services)*
- MongoDB SI Associate *(MongoDB)*
- Azure Fundamentals (AZ-900) *(Microsoft)*
- GitHub Foundations *(GitHub)*

EDUCATION

B.Tech in Information Technology

2018 – 2022

Dharmsinh Desai University, Nadiad · CGPA: 8.02
